7 distinct function of RE.

1. Inception:
Inception manks the beginning of a software Project It's the phase where the initial idea for the project is conceived and high-level objectives and goals are defined.

In general, most projects, inception begins when a need is identified or a new business market potential discovered. The stakeholders from the business community (business; managers, marketing people, product managers I define case ton the idea, thy to identify the breath and depth of the a business feasibility analysis, and winning description.
of the market,.

2. Elicitation:
Elicitation involves gathering detailed requirements from the stakeholders to understand what the software system should do. Common solicitation techniques include interviews, pupic surveys, workshops and observations. The aim is to uncover the user need, preferences, constraints and any other relevant information.

3. Elaboration:
The information obtained from customers during inception and elicitation is exported and refined in during elaboration. This procedure focuses on developing a refined technical model of software functions, features and constraints.

4. Negotiation:
Negotiation is the process of
